PROFESSIONAL EXPERIENCE

Creative IT --Dhaka, Bangladesh -Teaching Assistant of Online Support Team of Web development

November 2020 – June 2021

Software Engineer (i-Clique Solution Limited).

2023 – present
Dhaka, Bangladesh

As a Software Engineer at iClique Solutions, my focus centered on the financial technology CardPro product. I leveraged technologies like JSP, Servlets, Spring Boot, and Java. Specifically, I developed and managed software solutions for financial transactions and card processing within the CardPro domain. This involved utilizing Java-based technologies, with a primary emphasis on Servlets and JSP for dynamic web page creation. Additionally, I honed my skills in the Spring Boot framework for building scalable applications. Throughout the software development life cycle, from coding to deployment, I collaborated with a team to design and implement features, ensuring solutions met functional and performance requirements. My experience at iClique Solutions enriched my expertise in Java-based web development and contributed to the ongoing success of the CardPro product.

EDUCATION

BSC in Computer Science and Engineering, North South University 🌐

May 2018 – December 2022
Dhaka, Bangladesh

I have Pursued Bachelor of Computer Science and Engineering (CSE) with the CGPA 3.42/4.00.

SKILLS

Technical Skills

- Developed **dynamic web applications** using **JSP and Servlets** for the CardPro system.
- Built **scalable backend services** with **Spring Boot** and RESTful APIs.

Database and Data Management

- Utilized **Oracle databases** for transaction data storage and retrieval.
- Optimized **complex SQL queries** to support financial reporting.

Team Collaboration and Communication

- Worked closely with cross-functional teams to design, develop, and deploy features.
- Actively participated in **code reviews**, debugging, and performance optimization.

Financial Systems Expertise

- Implemented **secure card processing** and **real-time transaction management**.
- Integrated **payment gateways** for card authorization and settlements.

Software Development Lifecycle

- Collaborated in **Agile SDLC**, from development to deployment.
- Ensured compliance with **PCI DSS** for secure transaction handling.

PROJECTS

Lok Lagbe

In our day-to-day life, we face some problems which we can't solve without having equipment and knowing the technique, such as unlocking the door, fixing the pipe, painting walls, cleaning the car, etc. But some people around us can help us to get rid of these problems easily. We have to find the perfect service provider for these problems. Finding the perfect man is a hassle. We have to call many people to find one good man or we have to go out to search for one. In this pandemic situation, we can't go out easily and are not safe for finding suitable persons. Therefore, we propose a solution in our project that presents an android based application to make a common platform for customers and service providers. Our goal is to make a user-friendly app that will not only help to find service providers, as well as it'll be an interactive platform for both types of users.

E-commerceWebsite

This project will be a fully functional eCommerce website with user and guest checkout capabilities. We will start first by setting up our templates and data structure in the first two modules, then moving on to adding user checkout flow with payment integration. After we complete basic checkout with a logged in user, we will add in the ability for users to checkout as a guest using cookies.
